

Conserving & growing your natural capital

Green Asset Management

is Treescape®'s approach to managing trees and vegetation. We take a life-cycle approach and then apply a facilities management understanding to how we manage those assets.

Green Asset Management provides a sustainable and holistic approach to the way we manage our Green Assets.

Managing your Green Assets on an ongoing basis is the smartest and most economical way to maximise tree and vegetation health and vitality.

Treescape® can help you identify any potential problems early on, put a plan in place that supports healthy growth, and ensure your vegetation and trees look great and thrive well in to the future.

Green Asset Management

Managing your Green Assets on an ongoing basis is the smartest and most economical way to maximise tree and vegetation health and vitality

Risk

Health & Safety is our top priority. The regular upkeep and maintenance of trees avoids branches falling off or even trees falling over during storm conditions. This can prevent serious injury or death.

Health

Future sustainability is paramount. As well as maintaining the physical health of trees, these assets provide vital value to the wider community and wellbeing of people and staff.

Value

Many of our iconic native trees have irreplaceable intrinsic value. The financial benefit of pro-actively maintaining Green Assets frequently is more cost effective than having to fix an emergency situation.

We are a trusted, single source end to end solution provider

We create successful, sustainable outcomes for our clients through the safe and efficient delivery of integrated and tailored solutions, driven by innovation and powered by best in class equipment, technology, training and operations.

Asset Evaluation

Treescape® can help you identify what your Green Assets are worth and create a risk profile with a basic evaluation.

Green Asset Management Services Include:

- ✓ Capturing and recording information on the unique attributes of trees and other vegetation (such as at parks, tertiary institutions, schools and golf clubs).
- ✓ Assisting with landscaping works, with planting lists, species information and planting locations.
- ✓ Predicting the clean up costs and timeframes for storm response situations.
- ✓ Capturing data on future or past tree maintenance work, which is great for budget scheduling on large projects.
- ✓ Residential properties – Regular upkeep and maintenance goes beyond standard arborist work with disease identification and the prevention of potential safety risk to a property and surrounding houses.

Single source end to end solution provider

For an ongoing monthly fee, we provide cost-effective, regular maintenance for your Green Assets, including constant review & reporting as well as planning, delivery and analysis.

Intrinsic Value

Beyond that of a monetary asset value, trees and vegetation have intrinsic value that is irreplaceable. They provide health, shading and environmental benefits as well as having iconic and historic value.

Advanced mapping technology – leading the way in safety and innovation

Asset Management

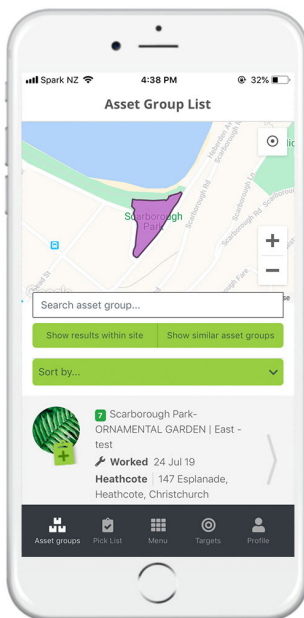

Treescape® uses asset mapping tools to assess and report on trees and vegetation. The software used for asset mapping is sophisticated, and capable of delivering detailed information in real time, in all kinds of client situations.

Treescape® has developed several mobile GIS hybrid software systems which help us to schedule complex projects and to plan for effective arboricultural workload management.
